

DagSnap: Description

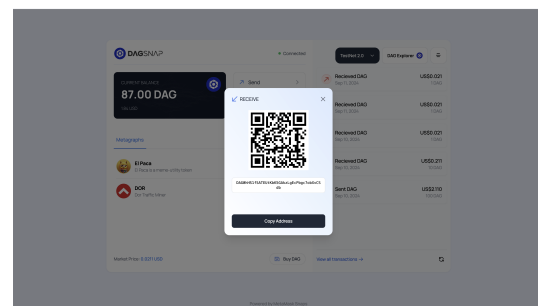

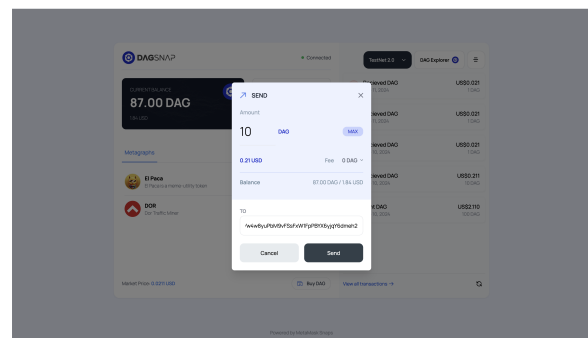

DagSnap: Bringing DAG to MetaMask 🚀

DagSnap is an exciting new MetaMask Snap that seamlessly integrates **DAG functionality** right into your MetaMask wallet. No more juggling multiple wallets or tools—DagSnap simplifies managing your DAG tokens with ease! 📁

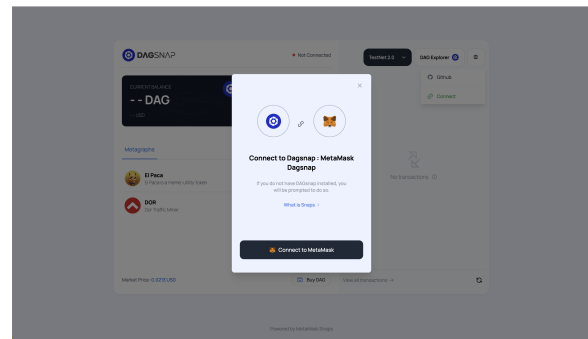

What It Does:

- **Create & Manage DAG Wallets:** Easily create or import your DAG wallet directly in MetaMask. No fuss, just smooth operations! 😎
- **Buy, Send, & Receive DAG Tokens:** Handle your DAG tokens effortlessly—buy, send, and receive them straight from MetaMask. Everything is just a click away! 💰
- **Seamless DAG Integration:** Powered by **dag4.js**, DagSnap connects you directly to the DAG ecosystem. It's smooth, intuitive, and user-friendly! 🔗

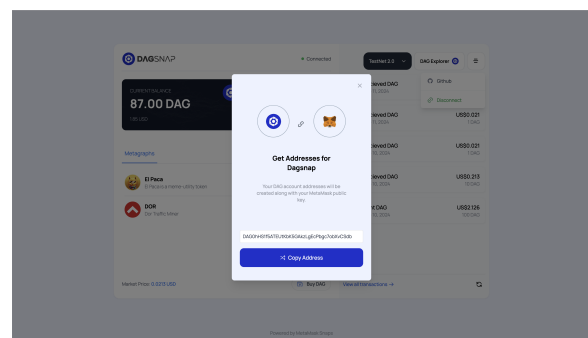

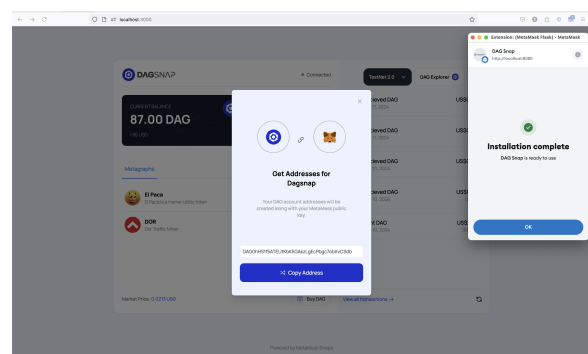

How We Built It:

- We built **DagSnap** using **Next.js** and **dag4.js** from scratch since there weren't any templates available for MetaMask Snaps with DAG.
- Faced with challenges like API errors, we overcame them by implementing a **proxy server** to keep things running smoothly. 🛠️

Why It's a Game-Changer:

- **DAG Accessibility:** DagSnap brings **DAG tokens** right into MetaMask—no need for separate wallets. This makes it easier for people to dive into the **Constellation ecosystem**. 🌐
- **Streamlined Experience:** Everything you need to manage your DAG tokens is right within MetaMask, making it a one-stop solution for all your crypto needs! 💡

What's Next:

- **Feature Expansion:** We plan to support more DAG-based tokens and improve transaction capabilities.
- **UI Enhancements:** Making the user interface even smoother and more intuitive.
- **Snap Publication:** We'll be publishing **DagSnap** and setting up a dedicated domain to reach a wider audience! 🌟
